

Meet EPA Regulations

for renovation and repair construction projects involving lead paint

Meet EPA regulations for renovation and repair construction projects involving lead paint

The EPA mandates the use of a HEPA vacuum when doing renovation work on buildings constructed prior to 1978 which may have lead paint in them. Renovation contractors must be certified by the EPA and use the proper equipment. Dustless HEPA filters meet all government requirements and are certified to **IENT-RP-CC001.5** insuring a minimum filtration efficiency of 99.97% at 0.3 micron.

Don't get thrown off the job

Regular shop vacuums retrofitted HEPA filters are not "certified," so if an OSHA or EPA inspector shows up on your job site, they can shut you down. The Dustless HEPA vacuum uses a certified HEPA filter.

Maintaining air flow is the key

The Micro Pre-filter bag and HEPA filter are designed to support optimum airflow. Other filters and pre-filters simply don't have the surface area to allow enough air to pass through to support effective dust control.

Size counts

Shop vacuums that are 12 gallons or less simply do not have the real estate inside them to support the air flow needed for effective dust control. The Dustless HEPA Vacuum has a roomy 16 gallon canister.

Longer lasting HEPA filter

You can greatly extend the life of your valuable HEPA filter by using a Micro Pre-filter to capture 99% of the dust, leaving your HEPA filter to capture only the smallest particles.

- Meets OSHA, EPA & NIOSH guidelines, IEST standards
- Captures down to .3 microns
- Economical alternative to expensive industrial HEPA vacuums
- Longer life HEPA filter when used with Micro Pre-filter
- Larger surface area of filters provides superior air flow
- Roomy 16 gallon canister for maximum airflow
- Engineered specifically to capture extra fine dust
- Maintains suction after ingesting 40 lbs of fine dust

How Small is a Micron?

- A micron is 1/25,000th of an inch.
- A human hair is about 100 microns.
- The naked eye can not see things smaller than 10 microns.
- The Micro Pre-filter captures particles as small as HALF a micron.
- The Dustless HEPA filter captures particles as small as .3 micron.

1/4 of a human hair

- 1 micron
- .5 micron
- .3 micron

The only particles your Dustless HEPA filter has to capture, when used with a Micro Pre-filter, are those between .5 and .3 microns.

REV0410TSF

"Renovate Right" with the affordable HEPA vacuum that uses a certified HEPA filter to meet OSHA, NIOSH and EPA (IENT) standards.

The **HEPA Floor Tool** features a beater bar as specified by EPA to meet renovation contractor certification requirements.

The Better HEPA Filter...

HEPA Filter 13201

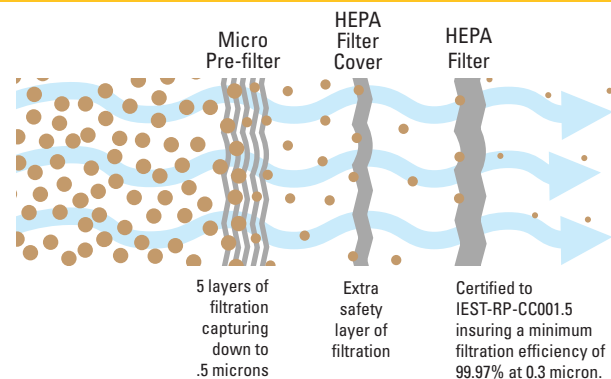

Longer Life: The Micro Pre-filter is an inexpensive bag that does all the heavy lifting, leaving the HEPA filter to capture only the finest particles.

More Surface Area: The Dustless HEPA filter has 50% more surface area than HEPA filters that retrofit into traditional shop vacuums. This translates into greater airflow and superior dust collection.

Certified: Dustless HEPA filters meet all government requirements and are certified to **IENT-RP-CC001.5**

The Micro Pre-filter Advantage

**CERTIFIED
RENOVATOR
SUPPLY**

**Get EPA certified by
using the right tools:**

- Certified HEPA Vacuum
- HEPA floor tool with beater bar
- Point-of-origin dust shrouds on hand tools
